## **Abstract**

In our country, disabled people encounter many .problems in integrating with the city and city life. The most important one is the "accessibility" in the physical space. Providing accessibility require disabled to move without being in need of any help, without any prevention and to participate in the life activities. It is seen in our country that the obstacle-free walkways for the disabled do not exist in the cities including the pedestrian areas, the legal arrangements with respect thereto are not yet able to achieve the required conditions in the physical environment, and the required sanctions and controls are not sufficient. Moreover, inability to present accurately the difference in the needs as based on the disability type

**Keywords:** visually-impaired, accessibility, orientation, physical arrangements.
